

i-CRM Server

The i-CRM Server allows your company to host a licensed amount of i-CRM accounts for your internal company or reseller use. The server is designed to be plug-in-and-use and will likely require no additional configuration besides basic network settings.

i-CRM Server is hosted at your company premises and is directly connected into your company network. The server is capable of running 24/7 with no intervention required from your company staff.

Norwest Advertising will assist your company with setting up the server.

This is the most cost-efficient and stable solution for delivering i-CRM to more than 25 clients.

Preinstalled Software

The server comes with the following pre-installed software:

*Slackware Linux Distribution v11 Full
i-CRM pre-compiled and pre-configured*

Enabled Services

These services are enabled and are necessary for running i-CRM:

*Apache Web Sever
mySQL Database Server
Sendmail*

Hardware Configuration

The server hardware configuration is basic and capable of handling large amounts of simultaneous i-CRM requests:

*AMD Sempron 2.0 Ghz CPU
1024 MB RAM
10/100 Ethernet Adapter
Dual 250GB Seagate Hard Drives (RAID)*

Requirements

For internet use a compatible static IP stable connection is required (DSL/Cable or higher). A router is also required for connection to the internet.

For network use an ethernet switch/hub is required. This usually present in most business networks.

Note: Setting up your router will be your company/technician responsibility.
